SUMMARY

Full-stack software engineer with 4+ years of experience building scalable web applications and backends using TypeScript, Node.js, AWS, and React.js. Passionate about mission-driven work, with experience developing features that drive engagement and operational efficiency. Excited to apply backend expertise to impactful projects in healthcare.

SKILLS

- **Languages and Frameworks:** TypeScript, Node.js, JavaScript, React.js, Next.js
- **Cloud and Infrastructure:** AWS (Lambda, API Gateway, S3, SQS, EventBridge), Docker, GitHub Actions
- **Databases:** MySQL, Microsoft SQL Server, PostgreSQL
- **Engineering:** RESTful APIs, Microservices, CI/CD, Unit and Integration Testing, Process Improvement
- **Leadership & Collaboration:** Agile/Scrum, Code Reviews, Cross-functional Collaboration, Mentorship

EXPERIENCE

Software Engineer, Returned.com - Remote

August 2023 - February 2025

- Architected, built, and deployed a cloud-native backend from scratch using AWS, TypeScript, and Node.js to rapidly scale a customer-facing return management web and mobile application.
- Reduced order data processing time from 5 minutes to 30 seconds by implementing a real-time webhook system using Google Cloud API, AWS Lambda, and EventBridge to expedite order data imports from supported retailers.
- Owned the end-to-end development of a custom notification system using Firebase, Node.js, AWS Lambda, and TypeScript, enabling users to set preferences and receive real-time order and return status updates.
- Automated data parsing and customer support interactions by integrating OpenAI and Anthropic APIs.
- Spearheaded the design, development, and launch of an internal web platform with Next.js and Node.js to accelerate returns processing, enable real-time monitoring, and reduce the time to resolve data issues.
- Accelerated code deployments and reduced bugs in production by implementing CI/CD pipelines with GitHub Actions and establishing Jest unit testing framework for AWS Lambda functions.
- Cultivated a productive, cohesive engineering culture using Agile methodologies, Jira, and code reviews.
- Strengthened account security by implementing a text-based MFA system with AWS Cognito for authentication.

Software Engineer, Drill Spot - Remote

July 2020 - August 2023

- Led the development of new microservices and a major migration to .NET 6 to enhance the functionality and performance of an eCommerce platform processing \$100M in industrial and hardware supply sales.
- Built and implemented RESTful APIs using C# and ASP.NET with an MVC pattern to streamline and automate order processing, SKU management, and marketplace listings, saving 100+ work hours each year.
- Upgraded a centralized customer service platform by creating and releasing features for order management and reporting features using React.js, increasing support efficiency, reducing issue resolution time, and improving CX.
- Increased revenue by 30% by developing and deploying an automated pricing optimization system using C#, .NET, SQL Server, SQL, and APIs, analyzing competitor data and adjusting prices dynamically across 1M+ SKUs.
- Enabled data-driven business decision-making and increased forecasting accuracy by managing a SQL server database with 10+ years of historical data, writing queries, and delivering detailed sales and profitability reports.

EDUCATION

- Bachelor of Science in Computer Science, University of Wyoming, 2020
